

Modified PPE Resin

Dupiacé™ **LEMALLOY**™

2026.03 version

Introduction

What is lupiace™

lupiac (modified PPE resin) is an amorphous engineering plastic, which is developed by Mitsubishi Gas Chemical Co., Inc., with its unique technologies and whose main components are the polyphenylene ether (PPE) and polystyrene (PS). It has a good balance of electric property, flame resistance, heat resistance, dimensional stability, moldability, and other properties. Additionally, its specific gravity is the lowest among engineering plastics. It is UL-approved and is used for the mechanism parts of home appliances and in electric/electronic office automation equipment, such as the chassis of office automation equipment. It is also used for a wide range of applications, such as automotive exterior parts and water related parts, including pumps by taking advantage of its hot water resistance.

Wide range of heatproof temperature

Thermal deformation temperature can be adjusted widely by changing the mixing ratio of PPE and PS.

Low specific gravity

lupiac has the lowest specific gravity among engineering plastics and enables weight saving.

The values described are typical values only.

High electric property-1

The dielectric breakdown strength of lupiace is the highest among engineering plastics and the insulation property is excellent.

High electric property-2

The electric permittivity and dielectric tangent of lupiace are the lowest among engineering plastics.

	PPE	POM	PC	PBT	PA6
Dielectrical Constant	2.8	3.7	2.9	3.2	3.4
Dielectric Tangent (1E-3)	6	7	9	20	20

High self-extinguishing property

lupiac has a high oxygen index and is easy to add flame resistance. A wide range of flame resistance grades (HB, V-1 and V-0) is available.

Resin	Oxygen Index
POM	15 ~ 16
PA66	22 ~ 25
PC	24 ~ 25
PPE	27 ~ 29
PS	18 ~ 19

High dimensional accuracy

lupiac has the lowest linear expansion coefficient among engineering plastics and offers excellent dimensional accuracy.

What is LEMALLOY™

LEMALLOY has sea-island structure. Matrix phase is crystalline resin, such as a polyamide resin (PA) or polypropylene resin (PP) and domain structure (in the matrix phase) is polyphenylene ether resin (PPE). This resin has the chemical resistance and moldability/workability of a crystalline resin and the dimensional stability and stiffness at high temperature of an amorphous resin together. It is therefore used in various environments. In automotive applications, it is frequently used for electric components, such as the junction box and connectors in an engine compartment, by taking advantage of the chemical resistance of a crystalline resin and the characteristics of PPE, such as low specific gravity and low water absorption.

It is an alloy made of PPE and a crystalline resin, PA or PP.

	Moldability	Oil Durability	Dimensional Stability	Modulus at high-temperature
Crystalline resins (C)	◎	◎	△	△
Amorphous resins (A) lupiac	× ~ ○	× ~ ○	◎	◎
Alloy	(A) - (A)	△ ~ ○	◎	◎
	(C) - (C) LEMALLOY	◎	○	○

Because of the sea-island structure of alloying, the alloy has a better oil resistance than PPE/PS. Its features include higher stiffness at high temperature and lower water absorption rate than PA.

Features

Grades for a wide range of heatproof temperature and various applications are available.

■ Features of Lupiace

- Stiffness, impact resistance, fatigue resistance, and other properties are stable over a wide range of temperature.
- Because of excellent insulation property and low electric permittivity/dielectric tangent, it is optimal for electric applications that require insulation.
- It has a low water absorption rate while the change in physical properties at saturated water absorption is small.
- It has a high deflection temperature under load and excellent thermal stability while the decrease in physical properties due to heat treatment is small.
- Because of self-extinguish property and excellent flame resistance, it is optimal for electric applications.
- Weight saving is possible due to a low specific gravity.
- It is suitable for precision molding since its mold shrinkage factor is small and it is insusceptible to molding conditions.
- It covers a wide range of heatproof temperature.

■ Features of LEMALLOY

- LEMALLOY has a high deflection temperature under load of 150° C or higher (at 0.45 MPa) even for its unreinforced grade.
- It has an excellent impact resistance.
- It has a chemical resistance equivalent to that of a polyamide resin or polypropylene resin.
- LEMALLOY have better dimensional stability compared to polyamide.
- It has an excellent flow property.
- When compared to those of a polyamide resin, it has lower water absorption rate and specific gravity.

Unreinforced Grades

Reinforced Grades

The values described are typical values only.

Applications

Iupiace and LEMALLOY are used in various fields from automobile parts to electric/electronic parts and medical devices.

For housing equipment

- Photovoltaic parts
- Boiler parts
- Battery parts
- Water meter parts
- Piping parts
- Floor heating parts
- Washing toilet seat parts

For household use

- Lighting parts
- TV housing
- Air conditioner parts
- Gaming machine parts
- Refrigerator parts
- Smartphone
- Air purification device parts
- NB personal computer parts
- AC adaptor
- Tablet
- Battery charger parts

For infrastructure/installation

- Underground piping parts
- Tunnel parts
- Road security parts
- Water purification equipment parts
- Automatic vending machine parts
- Elevator parts
- Medical device parts
- Semiconductor equipment parts
- Battery manufacturing facility parts
- Money changer parts
- Control instrument parts

For other applications

- Copier parts
- Printer parts
- Connector
- IC tray
- Insulating film
- Terminal block
- Sensor
- Motorboat parts
- Wire coating
- Inverter
- Pump parts
- Dish tray
- PC parts
- Inlet
- Scanner parts
- LED frame

WARNING

- The values described are typical values only.
- The usage examples indicated here do not guarantee results applicable to relevant uses of the products.
- It is the users' responsibility to investigate industrial property rights and the terms of use related to the uses and applications indicated here.
- For the handling (transport, storage, forming, disposal, etc.) of the products, it is advisable to refer to technical documents and the Safety Data Sheet (SDS) of the proper materials and grades. Please contact us for consultations when the products are used for the purpose of food containers and packaging, medical parts, safety equipment, and toys for children.
- In Japan, the colored products of each grade may contain chemicals subject to reporting requirements under the applicable law provided in Appendix 9 of Article 18-2 of the Enforcement Order, under Article 57-2 of the Industrial Safety and Health Act. For details, please contact us.
- For the export of our products and products incorporated with our products, please comply with the relevant laws and regulations, such as the Foreign Exchange and Foreign Trade Law.
- Please note that because of the chemical substance management systems in each country, the chemicals used in our products are subject to control, and separate applications might be required or are banned from imports and exports. It is advisable to inquire about the status of regulations in the relevant countries if you are exporting or importing our products.
