

High Performance Polyamide

*Reny*TM

<https://www.gpac.co.jp/>

GLOBAL POLYACETAL

Features of Reny

Reny is a proprietary molding compound based on mainly polyamide MXD6 that has been reinforced with glass fiber, carbon fiber or special minerals.

Reny generally has superior mechanical strength and modulus compared with other engineering plastics. Thus, Reny is suitable as a metal substitute in many applications, including automobiles, electronics, electrical appliances, machinery, and construction.

Special features

- Excellent mechanical strength and modulus over a wide range of temperatures
- Superior to commodity polyamides in dimensional stability and mechanical strength due to low water absorption
- Low thermal expansion coefficient, equivalent to that of metal alloys
- Highly resistant to oils and organic solvents
- Low mold shrinkage and low warpage
- Good surface finish even in highly filled grades

■ Comparison of Properties of PAMXD6 and Conventional Polyamides

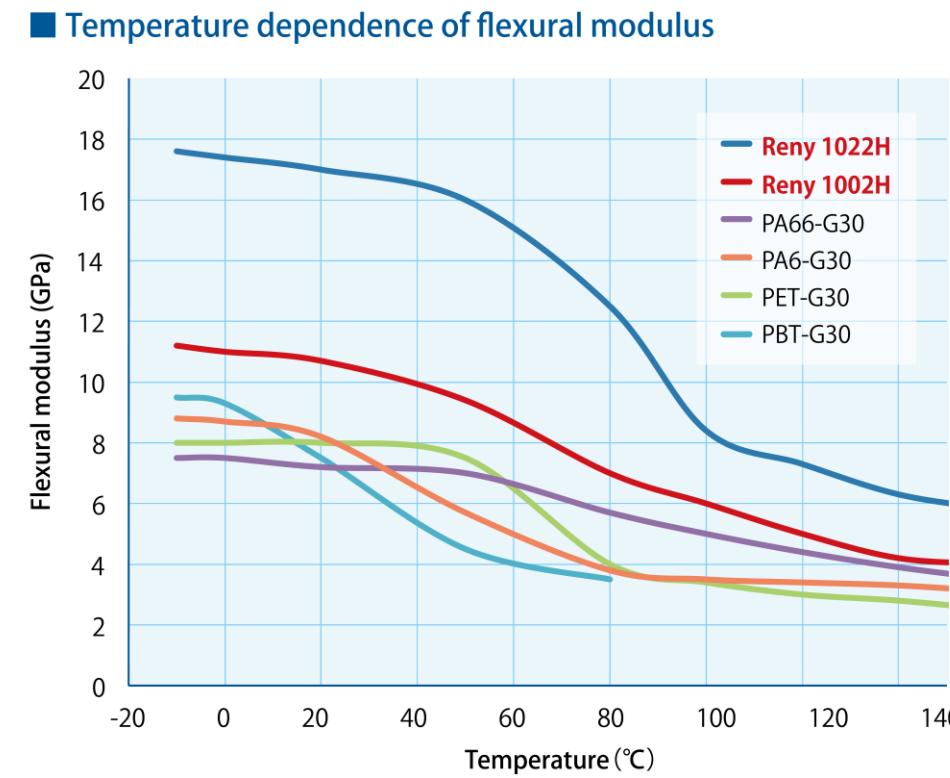

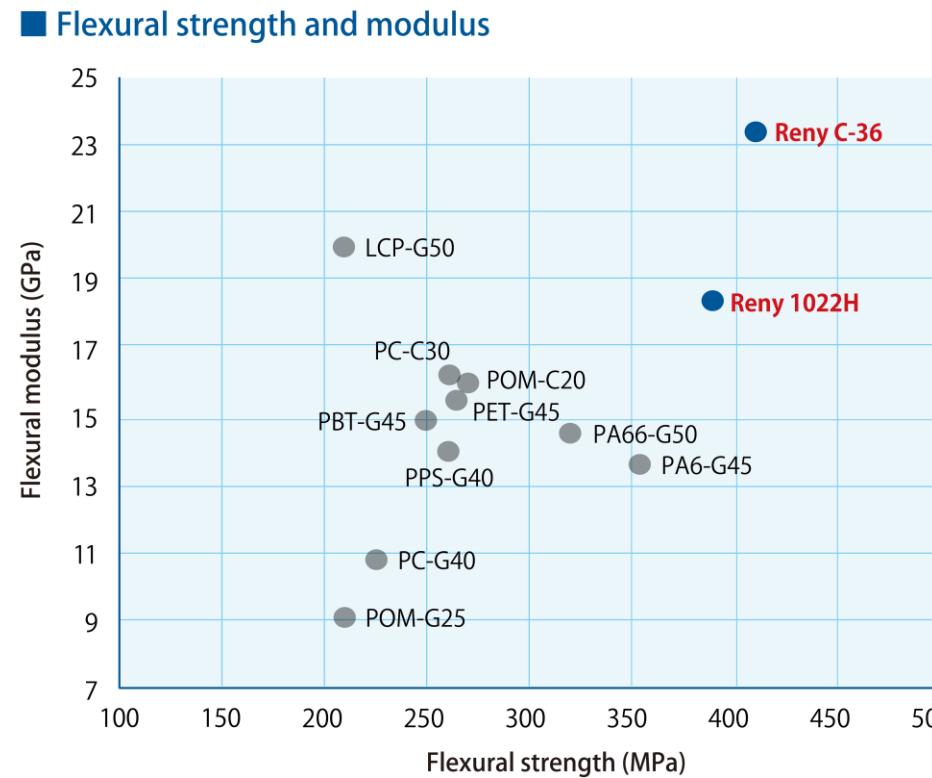

Properties	Units	Condition	PAMXD6	PA6	PA66
Density		20°C	1.21	1.14	1.14
Water Absorption	%	Immersion at 20°C	5.8	11.5	9.9
Moisture Regain	%	65% RH	3.1	6.5	5.7
Deflection Temperature Under Load	°C	1820kPa	96	57	60
Melting point	°C		243	225	268
Glass Transition Temperature	°C	DSC*	75	48	50
Thermal Expansion	10 ⁻⁵ cm/cm°C		5.1	8	10
Tensile Strength	MPa		99.0	61.8	76.5
Elongation	%		2.3	200	60
Tensile Modulus	GPa		4.7	2.5	3.1
Flexuel Strength	MPa		157	123	127
Flexuel Modulus	GPa		4.4	2.4	2.9
Izot Impact, Notched	J/m		20	59	39
Rockwell Hardness	M scale		108	85	89

*DSC : Differential Scanning Calorimeter

Reny provides resistance to bending.

Reny has high strength and modulus comparable to some cast metals and alloys. Reny has higher strength and modulus compared to various engineering plastics. Moreover, Reny has excellent flexural modulus over a wide range of temperature.

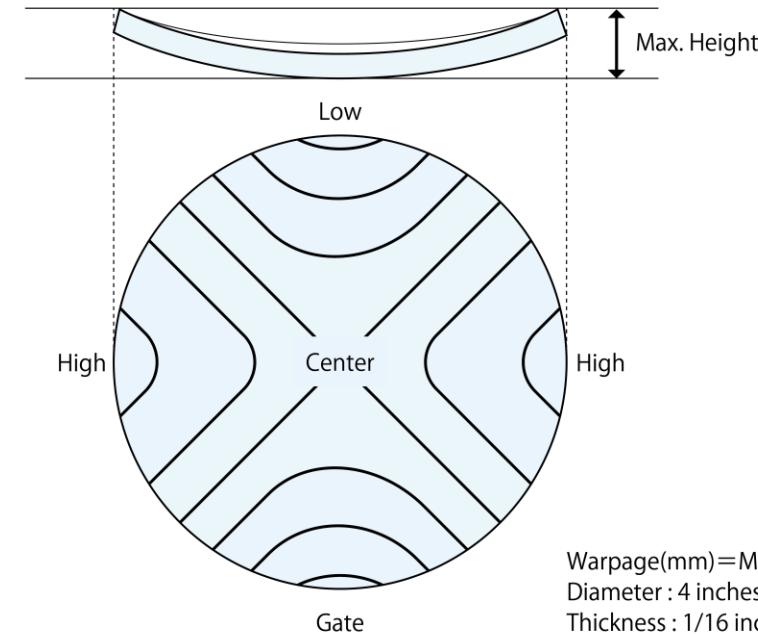

Reny provides excellent resistance to warping.

Reny has lower warpage compared to other crystalline polymer-based FRTPs.

■ Warpage

Materials	Warpage (mm) at specific mold temp.	
	75°C	130°C
Reny 1002H	–	3.98 mm
Reny 1022H	–	3.74 mm
Reny 2620	–	0.31 mm
Reny 2502AH	–	0.26 mm
PA66-G30	5.75 mm	8.31 mm
PET-G30	–	5.65 mm
PBT-G30	8.17 mm	–
PBT Low Warpage Grade	3.11 mm	–
PPS-G40	–	2.60 mm

Warpage(mm)=Max. Height – Thickness
Diameter : 4 inches
Thickness : 1/16 inch

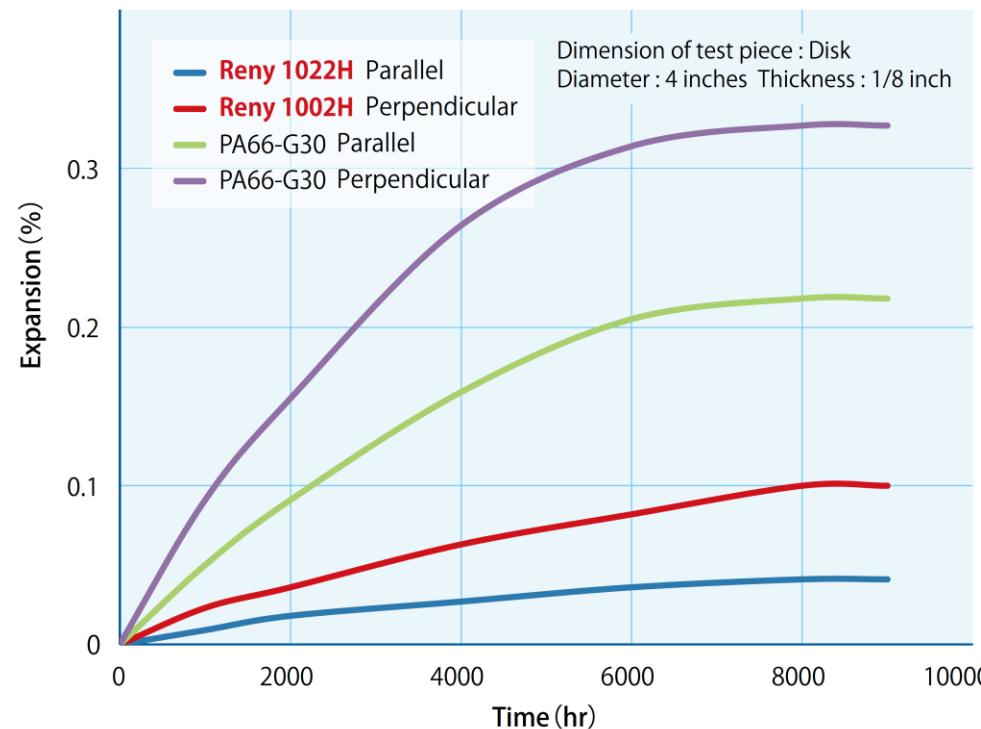

GLOBAL POLYACETAL

Reny offers low water absorption. / Reny can be used in high temperature.

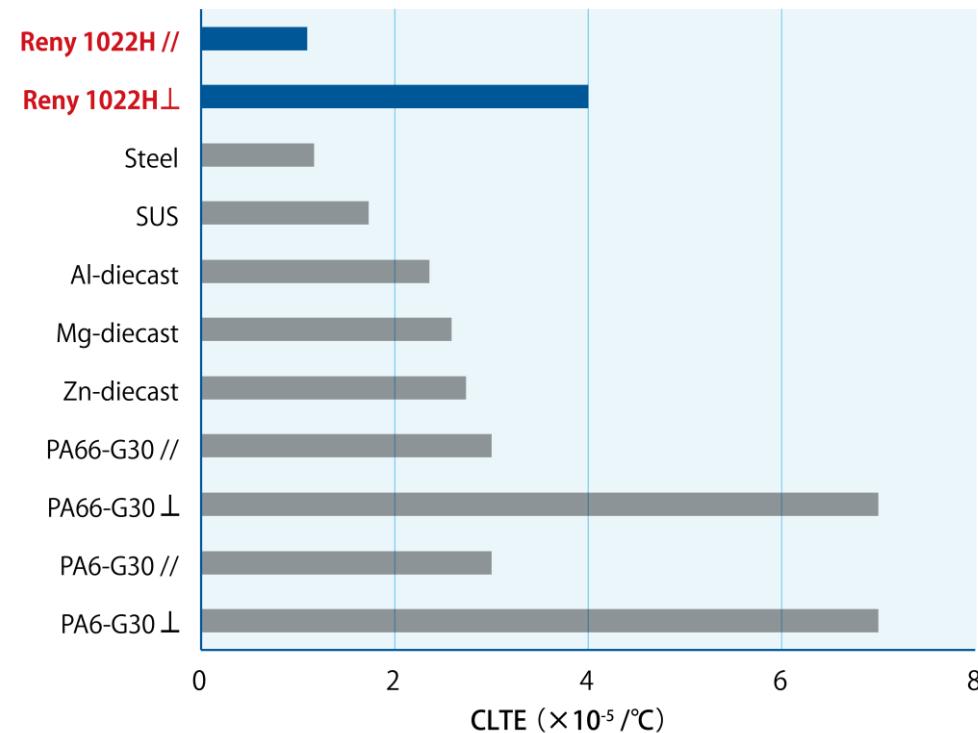

Owing to its low water absorption, Reny has better dimensional stability than typical polyamides.

■ Dimensional changes at 20°C, 65%RH

Reny has low coefficient of linear thermal expansion (CLTE) similar to that of metals or metal alloys.

■ CLTE comparison

Reny is highly chemical-resistant.

Reny has superb resistance against gasoline, lubricant, organic chemicals containing chlorine and other chemicals.

■ Chemical resistance

Weight increase (%) / Loss of tensile strength (%)

(Immersed for 7 days at atmospheric temperature)

GLOBAL POLYACETAL

Reny is extremely resistant to creep and fatigue.

Reny demonstrates superior creep resistance against high loads.

Reny offers good surface finish.

Even with high glass loadings, molded parts have excellent smooth surface.

▲ PA66-G50

Processing information - Predrying

Reny is supplied in a special bag that prevents moisture absorption during storage and transportation. Basically, predrying is not necessary prior to molding if the bag has just been opened. However, Reny absorbs moisture gradually when exposed to air, so the predrying process should be applied to pellets that have been left unused at least one hour after opening the bag. A hopper-dryer is recommended during the molding process.

■ Typical drying conditions are as follows :

Drying Method	Temperature	Time	Note
Trays in drying ovens	80°C	At least 12 hrs.	30mm maximum depth of pellets

Processing information - Processing conditions

The standard processing temperature range of Reny is 250 °C to 280 °C . The temperature of the resin must be adjusted to produce proper filling in the mold but should not exceed 300°C to prevent thermal decomposition.

The standard surface temperature of the mold is 120°C to 140°C to achieve sufficient crystallinity. That will assure good surface finish, good dimensional stability, full mechanical properties and low moisture absorption.

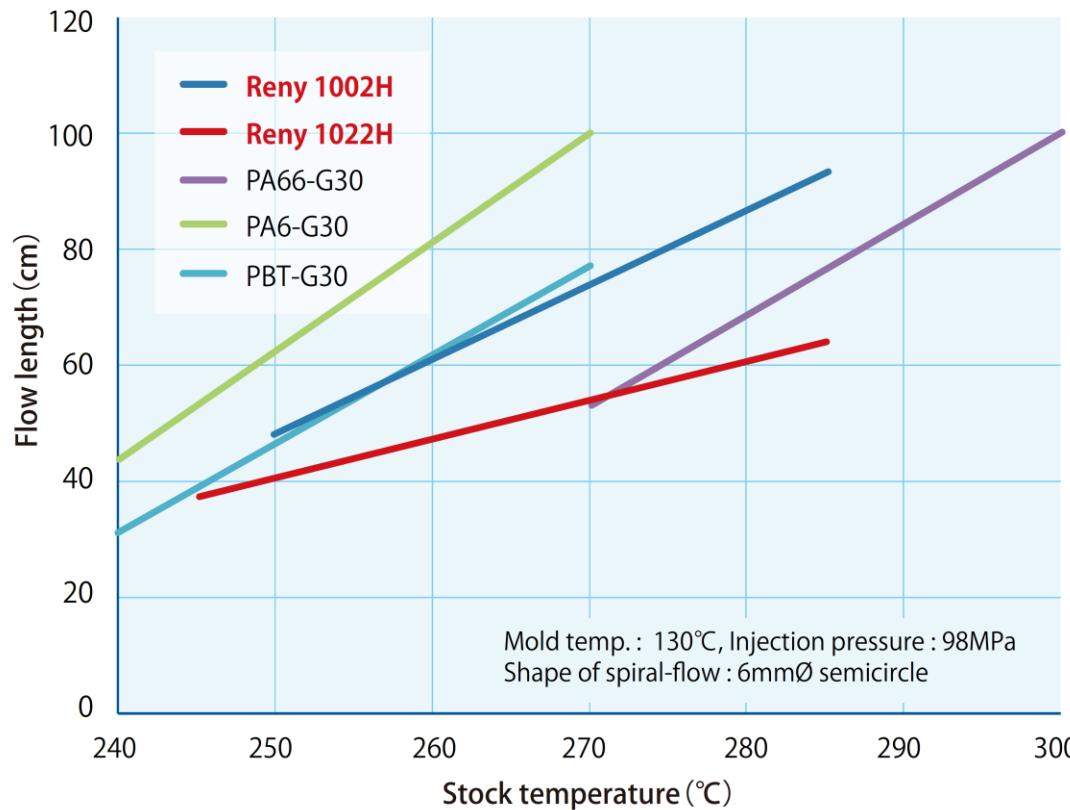

However, when the wall thickness of the molded parts is less than 1mm, its crystallinity may be insufficient. In that case, the molded parts should be annealed for at least one hour at 130°C in an air oven. Besides, we prepare special grades for thin-wall or small parts.

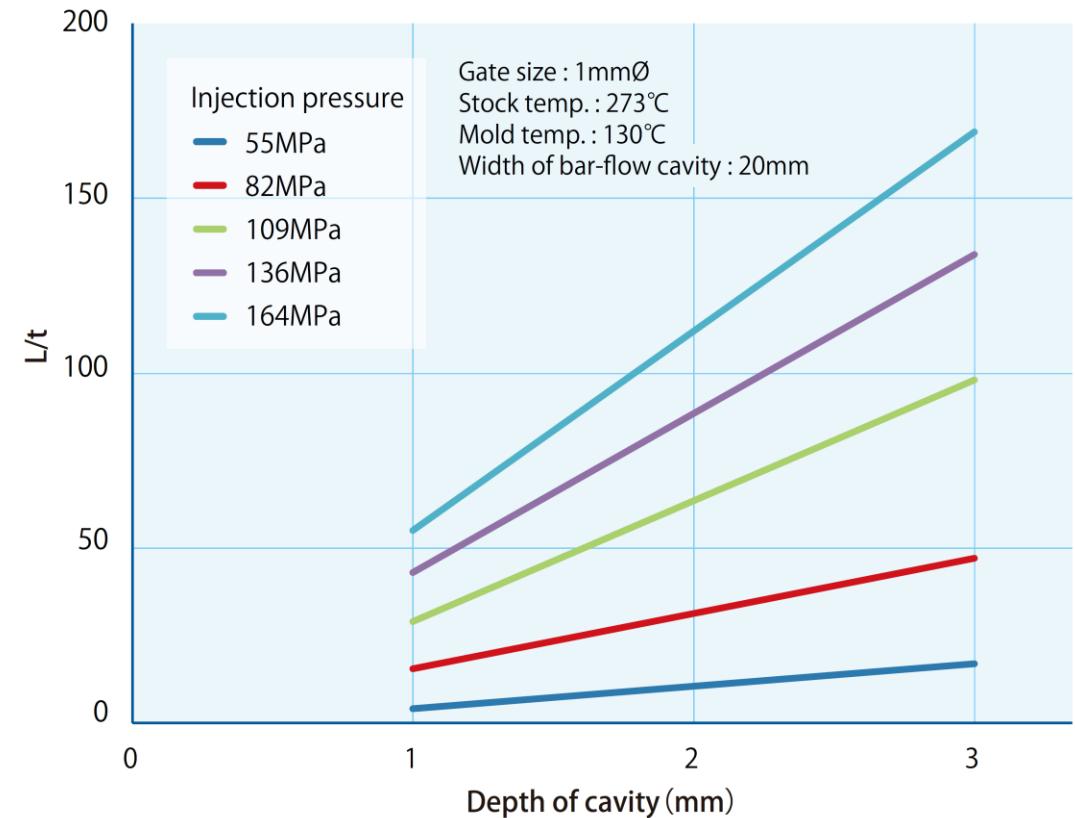

Flowability

The following graphs show the dependence of spiral-flow length on stock temperature and the relationship between bar-flow length (L/t) and depth of cavity.

■ Temperature dependence of spiral-flow

■ Relationship between bar-flow length (L/t) and depth of cavity of Reny 1022H

Notes

- The values described are typical values only.
- The usage examples indicated here do not guarantee results applicable to relevant uses of the products.
- It is the users' responsibility to investigate industrial property rights and the terms of use related to the uses and applications indicated here.
- For the handling (transport, storage, forming, disposal, etc.) of the products, it is advisable to refer to technical documents and the Safety Data Sheet (SDS) of the proper materials and grades. Please contact us for consultations when the products are used for the purpose of food containers and packaging, medical parts, safety equipment, and toys for children.
- In Japan, the colored products of each grade may contain chemicals subject to reporting requirements under the applicable law provided in Appendix 9 of Article 18-2 of the Enforcement Order, under Article 57-2 of the Industrial Safety and Health Act. For details, please contact us.
- For the export of our products and products incorporated with our products, please comply with the relevant laws and regulations, such as the Foreign Exchange and Foreign Trade Law.
- Please note that because of the chemical substance management systems in each country, the chemicals used in our products are subject to control, and separate applications might be required or are banned from imports and exports. It is advisable to inquire about the status of regulations in the relevant countries if you are exporting or importing our products.
